

REINTRODUCING THE SUN

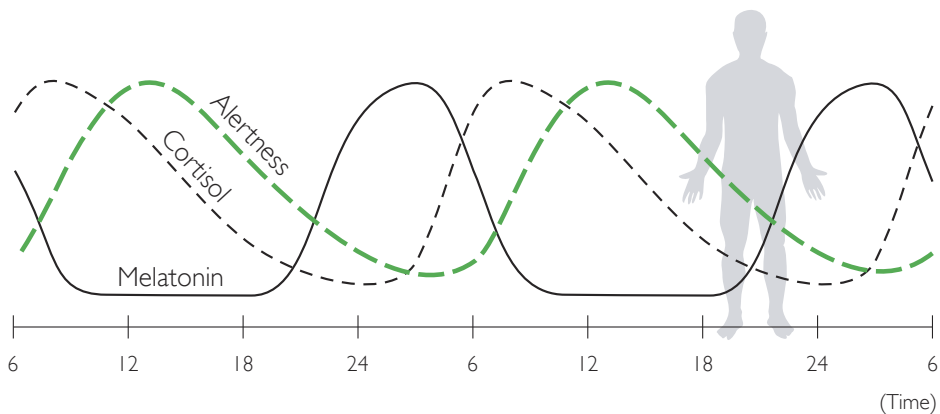

PARANS

Sunlight is the highest quality of light and is now available for use indoors through Parans' solar lighting.

Sunlight is collected through solar panels located on roofs or facades of buildings and channels it inside using flexible fibre optic cables. The sunlight flows out into your desired location through unique luminaires.

The levels of the hormones cortisol and melatonin are optimized when we are exposed to natural light. By adding sunlight to our environment we can achieve improvements in health and productivity.

SEE THE LIGHT!

***Bring healthy sunlight inside with
Parans' solar lighting.***

Lund University, Sweden. Parans' solar lighting delivers sunlight in meeting room.

Parans' solar lighting is a popular choice for use in offices, hospitals, retail areas and many public places. The installation is as simple to fit in existing buildings as it is to install in new construction, transforming a dark room with natural sunlight.

In many buildings, lighting can account for up to 50% of the use of electricity, Parans solar lighting decreases the need for such energy consumption. Parans' solar lighting is full spectrum lighting, naturally free from flickering.

Parans' solar lighting is sold worldwide providing healthy sunlight delivery throughout the year, winter and summer. Find your closest dealer on www.parans.com or contact Parans directly for project inquiries or questions regarding dealership opportunities.
