

Parans SP2F is a versatile mounting fixture, providing a reliable solution for installations of Parans SP2.1 on both roofs and facades.

Parans SP2F in 40° tilt

Parans SP2F in 60° tilt

Assembly detail

Elongated tube

Parans SP2F is made of hot dip galvanized steel and delivered as an assembly kit, see images. The vertical tilt angle can be set between 0-60°. In its standard configuration, it can be mounted on concrete, wood and other stable materials on both roofs and facades. To mount on soft (e.g. tar) roofs, a larger mounting foot can be ordered from Parans. When installing several Parans SP2 side by side, it can be advantageous to merge two or more Parans SP2F into one longer fixture using the included couplings.

Contents

- 2 Horizontal tubes (1200 × Ø 27 mm)
- 2 Elevation tubes (600 × Ø 27 mm)
- 4 Standard Feet (187 × 42 × 200 mm)
- 4 Locking brackets
- 6 90° multi angle brackets
- 8 U-bolts + nut packs
- 2 Coupling tubes (200 × Ø 22 mm)
- 4 Bolt + nut packs (for coupling)
